Laboratory Activity: Designing an SCM Workflow with Software Tools

Title

"From Supplier to Customer: Building an Integrated SCM Workflow"

Learning Outcomes

- Apply SCM software modules to simulate procurement, warehousing, and distribution processes.
- Design a simple workflow that connects these processes in a unified system.
- Analyze how integration improves efficiency, transparency, and customer satisfaction.

Activity Setup

- **Tools/Software:** ERP demo environment (e.g., Odoo, SAP Student Version, or any SCM simulation tool).
- **Group Format:** Teams of 5 students.
- **Duration:** 90 minutes.
- **Materials:** Preloaded demo accounts, worksheets for workflow mapping, competitive leaderboard.

Step-by-Step Procedure

1. **Introduction (10 min)**
    - Show a sample workflow diagram (it is provided in the presentation)
2. **Procurement Simulation (20 min)**
    - Each team creates a purchase order for raw materials.
    - Record supplier details, order quantity, and expected delivery date.
    - Task: Ensure supplier data flows into warehouse inventory.
3. **Warehousing Simulation (20 min)**
    - Teams receive the goods into the warehouse module.
    - Update stock levels, assign storage locations, and generate inventory reports.
    - Task: Link procurement data to warehouse records.
4. **Distribution Simulation (20 min)**
    - Teams schedule delivery using the distribution/transportation module.
    - Assign routes, track shipments, and confirm customer delivery.
    - Task: Ensure warehouse stock is correctly deducted and delivery is logged.

5. **Workflow Design (15 min)**
    - Teams create a **workflow diagram** showing the connection between procurement → warehousing → distribution.
    - Use arrows, icons, or software screenshots.
6. **Presentation & Reflection (15 min)**

- Each team presents their workflow.
- Discuss challenges and benefits of integration.
- Instructor highlights best practices and awards points for accuracy, creativity, and efficiency.

Assessment / Rubric

Criteria	Excellent ⑤	Good ③	Needs Improvement ①
Workflow Accuracy	Correctly connects all three processes	Minor errors in connections	Major gaps or missing steps
Software Application	Demonstrates effective use of modules	Partial use of modules	Minimal or incorrect use
Team Collaboration	Clear roles and smooth teamwork	Some collaboration issues	Poor coordination
Presentation	Clear, professional, engaging	Adequate but unclear in parts	Disorganized or incomplete
